Preface	xi
Dedication	xv
Mizan Rahman, his Mathematics and Literary Writings <i>Richard Askey, Mourad E.H. Ismail, Erik Koelink</i>	1
References	8
<i>q</i> -Bessel functions	29
<i>L. D. Abreu, J. Bustoz</i>	
1 Introduction	29
2 Completeness: A Dalzell type criterion	31
3 Completeness: An entire function approach	36
References	38
<i>a</i> -Gaussian Polynomials	39
<i>George E. Andrews</i>	
1 Introduction	39
2 <i>a</i> -Gaussian polynomials	42
3 Limiting Cases and Identities	49
4 <i>a</i> -Generalizations of Finite Rogers-Ramanujan Type Identities	52
5 Single Variable Polynomial Rogers-Ramanujan Generalizations	55
6 Conclusion	58
References	59
On a generalized Gamma convolution related to the <i>q</i> -calculus	61
<i>Christian Berg</i>	
1 Introduction	61
2 The analytic method	63
3 The entire function $h(z) := \Gamma(z)(q^z; q)_\infty$	72
References	75
Ramanujan and Cranks	77

<i>Bruce C. Berndt, Heng Huat Chan, Song Heng Chan, Wen-Chin Liaw</i>		
1	Introduction	78
2	Entries on Pages 179 and 180	79
3	Entries on Pages 18 and 20	81
4	Entries on Pages 70 and 71	82
5	Entries on Pages 58 and 59	83
6	Congruences for the Coefficients $\lambda_n$ on Pages 179 and 180	85
7	Page 182: Partitions and Factorizations of Crank Coefficients	91
8	Further Entries on Page 59	93
9	Proofs of Theorems 8.1 and 2.1	95
10	Conclusion	96
	Acknowledgments	97
	References	97
The Saalschütz Chain Reactions and Multiple $q$ -Series Transformations		99
<i>CHU Wenchang</i>		
1	Introduction and notation	99
2	The Saalschütz chain reactions	102
3	Basic Almost-poised Transformations	108
4	Reductions and Consequences	110
	4.1 George Andrews	110
	4.2 David Bressoud	111
	4.3 Other transformations	112
5	Multiple Rogers-Ramanujan Identities	114
	Acknowledgments	120
	References	120
Painlevé Equations and Associated Polynomials		123
<i>Peter A. Clarkson</i>		
1	Introduction	123
2	Second Painlevé equation	126
	2.1 Rational solutions of $P_{II}$	126
	2.2 Roots of the Yablonskii-Vorob'ev polynomials	130
3	Third Painlevé equation	132
	3.1 Rational solutions of $P_{III}$	132
	3.2 Algebraic solutions of $P_{III}$	136
4	Fourth Painlevé equation	142
	4.1 Rational solutions of $P_{IV}$	142
	4.2 Okamoto polynomials	143
	4.3 Generalized Hermite polynomials	148
	4.4 Generalized Okamoto polynomials	151
5	Conclusions	155
	Acknowledgments	155

<i>Contents</i>	vii
References	156
Appendix: The Generalized Hermite polynomials	161
Appendix: The Generalized Okamoto polynomials	162
Zeta Functions of Heisenberg Graphs over Finite Rings	165
<i>Michelle DeDeo, María Martínez, Archie Medrano, Marvin Minei, Harold Stark, and Audrey Terras</i>	
1 Introduction	165
2 Ihara-Selberg Zeta Functions	170
References	182
$q$ -Analogues of Some Multivariable Biorthogonal Polynomials	185
<i>George Gasper, Mizan Rahman</i>	
1 Introduction	186
2 Calculation of $W^{(p)}(q)$	193
3 Computation of the integral in (1.22)	195
4 Biorthogonality	197
5 Transformations of $F_{m,n}(x, y)$ and $G_{m,n}(x, y)$	201
6 Proof of (1.24)	205
References	208
Multivariable Askey-Wilson Polynomials	209
<i>G. Gasper, M. Rahman</i>	
1 Introduction	209
2 Multivariable Askey-Wilson polynomials	212
3 Special Cases of (2.2)	216
References	219
Continuous Hahn functions	221
<i>Wolter Groenevelt and Erik Koelink, Hjalmar Rosengren</i>	
1 Introduction	221
Acknowledgments	225
2 Orthogonal polynomials and functions	225
3 A bilinear summation formula	230
4 Clebsch-Gordan coefficients for hyperbolic basis vectors of $\mathfrak{su}(1, 1)$	238
4.1 The Lie algebra $\mathfrak{su}(1, 1)$	238
4.2 Hyperbolic basisvectors	242
4.3 The continuous Hahn integral transform	245
4.4 A realization of the discrete series representations.	246
5 The continuous Hahn integral transform	250
5.1 The difference operator $\mathbf{\Lambda}$ and the Wronskian	250
5.2 Eigenfunctions of $\mathbf{\Lambda}$	255

5.3	Continuous spectrum	259
5.4	Discrete spectrum	273
5.5	The continuous Hahn integral transform	279
References		282
Series and Integrals		285

1	Introduction	285
2	Theorem 1.1 and its Applications	288
3	Connection Coefficients	291
4	The Nassrallah-Rahman Integral	295
5	A Characterization Theorem	296
Acknowledgments		298
References		298
Little $q$ -Jacobi Functions		301
<i>Kevin W. J. Kadell</i>		
1	Introduction and summary	301
2	The $q$ -binomial theorem (1.5) and Ramanujan's ${}_1\psi_1$ sum (1.8)	307
3	The symmetry (1.10) of the Rogers-Fine function	311
4	Heine's $q$ -Gauss sum (1.4)	315
5	The nonterminating $q$ -Chu-Vandermonde sum (1.12)	319
6	The little $q$ -Jacobi polynomials	321
7	The little $q$ -Jacobi functions	324
8	Conclusion	332
References		334
A second addition formula for continuous $q$ -ultraspherical polynomials		339
<i>Tom H. Koornwinder</i>		
1	Introduction	340
Acknowledgments		346
2	Proof of the new addition formula	346
3	Rational biorthogonal functions for the Askey-Roy $q$ -beta measure	353
4	Concluding remarks	357
References		359
A bilateral series involving basic hypergeometric functions		361
<i>Hjalmar Rosengren</i>		
1	Introduction	361
2	A bilateral summation	362

<i>Contents</i>	ix
